M-Pesa Paid But USDT Not Released: Immediate 3-Step Recovery Protocol

One of the most stressful experiences for Kenyan crypto buyers is sending KES via Safaricom M-Pesa on a peer-to-peer marketplace, only to find that M-Pesa is paid but USDT is not released because the merchant went offline or claims they did not receive the funds. Follow these exact rules:

Never Cancel the Order: Scammers often call you on WhatsApp or regular phone lines asking you to cancel the order so they can "refund" you. Once you cancel, escrow releases the USDT back to the seller.

Submit Your Safaricom M-Pesa Statement: Open the M-Pesa app, export a verified mini-statement PDF showing the exact transaction code, recipient name, and timestamp, and attach it to the escrow appeal window.

Eliminate Human Counterparties: Switch to automated API settlement on the SwiftTrader Kenya App where USDT and trading margin are credited by code the instant your STK Push completes.

P2P vs. Direct M-Pesa STK Push vs. KES Bank Transfer (Absa, KCB, Equity)

Settlement Method	Counterparty Release Speed	Escrow Dispute Risk
Manual P2P M-Pesa Transfer	5 mins to 6 hours (human dependent)	High ("Paid but not released" delays)
SwiftTrader Automated M-Pesa STK Push	Instant (310 seconds via Daraja API)	Zero (100% automated credit)
